(54) Title: INHALATION DEVICE ROTARY ACTUATOR

FIG. 2

(57) Abstract: An inhalation device (100) is disclosed that can include a first housing (300) and a connecting member (200) at least partially disposed within the first housing (300) of the inhaler device (100). The inhalation device (100) can also include a button (250) secured to the first housing (300) and further engaged with the connecting member (200), and a biasing member (106) secured to one end of the connecting member (200), such that the connecting member (200) is adapted to at least partially reciprocate within the first housing (300) in order for the inhaler device (100) to dispense a liquid. In addition, the connecting member (200) may include a first cam member (210) and a second cam member (220) on its exterior region. Further, the connecting member (200) may include a first follower member (230) and a second follower member (240) in its interior region.
