

Tensile-force-enhancing tube for an implantable electrode lead or a catheter, electrode lead with a tensile-force-enhancing tube, and catheter with a tensile-force-enhancing tube

5 **ABSTRACT**

A tensile-force-enhancing tube (1) for an implantable electrode lead (2) or a catheter comprises a tubular braid (11) which is embedded in an elastomer material (12), wherein the braid (11) comprises at least one cross thread (111) and at least one axial thread (112).
