

Abstract

“APPARATUS FOR FORMING A FIRST STATE AND A SECOND STATE ON AN OPTICAL RECORDING MEDIUM”

An apparatus for forming a first state and a second state on an optical recording medium in response to input data having a first level and a second level, respectively, in an optical recording apparatus is provided. The apparatus comprises a recording waveform generating unit generating a recording waveform which includes a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data and a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data.
