

ABSTRACT**CEILING MOUNTED DEVICE FOR IMPROVED AIR CIRCULATION AND QUALITY**

5 A device for improved air circulation and improved air quality in an enclosed space,
having a rectangular housing structure with inlets for air to be drawn into the housing
structure and outlets for air to be circulated back into the enclosed space, the device
also consisting of a plurality of ionizers to remove odors and air particulates, a plurality
of UV lamps, a plurality of Bladeless Fans and an Operating Controls System which
10 controls the operations of each ionizer, each UV lamp and each Fan wheel.

The ionizer or UV lamp or bladeless fan in the device may separately operated or
operated all together, for improving the air quality in an enclosed space.
