

FACE AUTHENTICATION APPARATUS, CONTROL METHOD AND PROGRAM
THEREFOR, FACE AUTHENTICATION GATE APPARATUS, AND CONTROL METHOD
AND PROGRAM THEREFOR

5

ABSTRACT

A face authentication apparatus (50) includes an image generation unit (102) that generates a first image by capturing an image of a person, a control unit (104) that, when the first image does not satisfy a criterion for face collation, controls lighting and causes the image
10 generation unit (102) to generate a second image by capturing an image of the person again, and a face authentication unit (52) that executes face authentication by using the second image.
