Title of Invention

PHARMACEUTICAL COMBINATIONS FOR TREATING TUMOR COMPRISING ANTI-CD19 ANTIBODY AND NATURAL KILLER CELL

Abstract

Provided is a pharmaceutical combination comprising an antibody specific for CD19 and a natural killer cell, and a treatment method using the same. Such a pharmaceutical combination is capable of exhibiting synergistic therapeutic effects on a malignant tumor of B-cell origin such as non-Hodgkin's lymphoma, chronic lymphocytic leukemia, and/or acute lymphoblastic leukemia.
