

## ABSTRACT

Provided are a communication method, a terminal device and a network  
5 device. The communication method comprises: a terminal device determining a  
discontinuous reception (DRX) parameter corresponding to a target service; and the  
terminal device executing a target service in a discontinuous reception mode  
according to the DRX parameter corresponding to the target service. By means of the  
embodiments of the present application, a DRX parameter corresponding to the target  
10 service can be flexibly determined.
