

Abstract

An image processing program for causing a computer to execute: a procedure for obtaining a first image; a procedure for obtaining a second image; a procedure for changing at least a part of the second image in accordance with a signal; and a procedure for processing the first image using the changed second image. The second image is at least one of a handwritten image, a letter image, and a selected image, and the signal is used in a process which splashes the second image in a procedure which changes at least a part of the second image.
