NOVEL USE OF KINASE INHIBITOR

ABSTRACT

The present invention belongs to the technical field of medicines, and relates to novel use of a kinase inhibitor. Disclosed is use of a compound of general formula (I) or a pharmaceutically acceptable salt, stereoisomer or crystal form thereof in the manufacture of a medicament for treating and/or preventing prostate cancer, wherein variables in the general formula are as defined in the specification. Researches show that the compound of general formula (I) or the pharmaceutically acceptable salt, stereoisomer or crystal form thereof has a therapeutic effect on prostate cancer, and further has a significant therapeutic effect on castration resistant prostate cancer and castration sensitive prostate cancer as well as metastatic castration resistant prostate cancer.
