[ABSTRACT]

REFRIGERATOR AND STORAGE CASE PROVIDED IN REFRIGERATOR

[Problem] To provide a refrigerator that is capable of suppressing transpiration of water content in foodstuff by maintaining a humidity of a storeroom and that is capable of suppressing dew condensation.

[Solution] The refrigerator includes a vegetable compartment 500; storage cases (lower case 7 and upper case 8) provided in the vegetable compartment 500; and a cover 9 that covers openings of the storing cases. The cover 9 is a double structure with a hollow internal space. The cover 9 is provided with a vent hole 12a that connects the internal space of the double structure and the space in the vegetable compartment 500 that is an exterior of the storage cases, and a vent hole 12b that connects the internal space of the double structure and the space in the storage case. The internal space of the double structure is configured as an air passage 13 that connects the space of the vegetable compartment 500 that is an exterior of the storage case and the space in the storage case.
