

MEDICAMENT ORDER-PICKING DEVICE

ABSTRACT

5 The invention relates to a medicament order-picking device
 (1) having at least one shelving device (7) and at least one
 movable shelf operating device (6) for storing medicament
 packages and for removing stored medicament packages. The at
 least one shelving device (7) has two vertical braces (8a, 8b),
10 a rear wall (4) which is releasably connected to the vertical
 brace pair (8), two lateral wall elements (9a, 9b), each of
 which is releasably connected to a paired vertical brace (8,
 8b), and at least one storage base (10). The at least one
 storage base (10) has two corner sections (10e, 10f) which are
15 designed to run in a rounded or angled manner and each of which
 is supported by a respective storage base support (8c) of the
 two vertical braces (8a, 8b) such that the lateral edge (10a) of
 the at least one storage base (10), said lateral edge running
 between the corner sections (10e, 10f) which run in a rounded or
20 angled manner, is arranged so as to lie flush with the rear wall
 (4).
