(54) Title: A TECHNIQUE FOR PLATFORM-INDEPENDENT SERVICE MODELING

(57) Abstract: A template-driven system for generating platform-specific artifacts, such as program code, from platform-independent service models is described. The system comprises a template storage (102) with platform-specific templates, each template including platform-specific model transformation information; a repository (104) with a plurality of at least essentially platform-independent service model elements and one or more service models modeled from the model elements; and a generator (106) adapted to generate platform-specific artifacts by applying the transformation information included in the templates to the service models.
