(54) Title: A MEDICAL PACKAGING

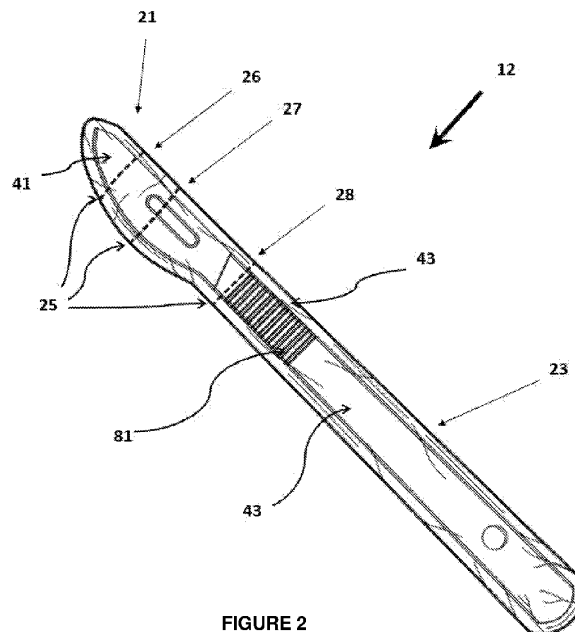

FIGURE 2

(57) Abstract: A medical packaging (12), used to enclose a single-use medical device (81), with multiple frangible operating lines (26, 27 28) and corresponding frangible connections (25) to define a removable first end (21) which reveals at the time of use an operative part (41) forming the key part that is to come into contact with the patient, while the remaining part of the device including the controlling part (43) is retained in the rest of the packaging but can be used to control the device without hindrance. Each of the multiple frangible operating lines (26, 27 28) indicating on the packaging the difference between the key part that forms the operating part (41) of the device for one of a plurality of predefined medical procedures wherein the identification of the frangible operating lines immediately educates and instructs the user in the correct usage in a sterile and clean manner.
