METHOD AND APPARATUS FOR SHARING REGIONAL INFORMATION

ABSTRACT

The present application provides a method and an apparatus for sharing regional information, where the method for sharing regional information includes: obtaining a payment bill query request initiated by a user on a third-party payment platform; obtaining user information based on a payment bill if finding, based on the payment bill query request, that a payment institution has generated the payment bill, where the user information includes a region that the user belongs to; and pushing, by using a third-party payment platform account, information for notifying that the payment institution has generated a payment bill to all users in the region that the user belongs to, if the information for notifying that the payment institution has generated a payment bill has not been pushed to the region that the user belongs to. Based on the present application, accurate bill generation information of a payment institution is pushed to other users on a third-party payment platform based on a query performed by a certain user by using the third-party payment platform, to prevent the user from missing a payment period.
