

ABSTRACT

The present invention relates to the massage technical field, and provides a multifunctional head massager, which comprises a helmet including a front shell and a rear shell, and a controller connected to the helmet. A blinder for massaging eyes is detachably connected to the front shell. In the present invention, the blinder is detachably connected to the front shell, so that the head massager has the eye massage function at the same time. When users don't want to massage their eyes, the blinder can be removed, and the head massage function is not affected. Thus, the users can choose the massage way freely, this design has more complete function, and is more human-friendly.
