

METHOD, APPARATUS, USER DEVICE AND SERVER FOR DISPLAYING PERSONAL HOMEPAGE

ABSTRACT

The present application discloses a method, an apparatus, a user device and a
5 server for displaying a personal homepage. The method includes: receiving current
activity status information of a user of a personal homepage that is provided by a
server, where the current activity status information includes a current activity theme
picture or a current activity theme video; and displaying the current activity status
information in a background area of the personal homepage. In implementations of
10 the present application, an activity of the user of the personal homepage can be
intuitively learned of from the personal homepage, thereby preventing a viewer from
learning of the activity of the user of the personal homepage through another channel,
and saving system resources.
