

Abstract of the Disclosure

An object is to provide a hosiery wearing aid which can be produced in an easier and less-cost manner and has greater portability. A hosiery wearing aid is provide which includes a sock wearing member which is flat and made of flexible elastic material; a sole guide member which is located in a central part of the sock wearing member and formed by a U-shaped cut; and a pair of tie band members which link, member by member, a corresponding one of end portions of mutually-opposed parts formed via the sole guide member in the sock wearing member and a corresponding one of two apexes of the sole guide members. The sole guide member is kept in the flat shape and the sock wearing member is able to provide i) an opening in a side in which the sole guide member is formed, and ii) a hollow halved bottomless cylindrical shape, when the end portions of the mutually-opposed parts are mutually bent in an opposed direction.
