

ABSTRACT

PEPTIDE

5 A novel substance which adds body to a food product,
and a body-adding agent for food products that uses said
substance are provided. More specifically, the body adding
agent for food products is characterized by having as an
active component a peptide, or a salt thereof, that is
10 characterized in that the γ -glutamyl bond number is 2-4 and
the peptide chain length is the γ -glutamyl bond number +1
to +2, a food product manufacturing method that uses said
peptide, and a method for adding body to a food product,
characterized by adding said peptide are provided.
