ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: SET SCREW WITH ROTATING POINT

(57) Abstract: A set screw fastener (100) has an aperture (122) at one end for a tightening means and an aperture at an opposite end (124) capable of receiving a shaft (131) of a pin member (130). Upon rotating the set screw by the tightening means the pin member also rotates until the point contacts the material to be clamped then continued rotation of the set screw forces the pin member to clamp the material without rotation such that the material will not be damaged during the rotation of the set screw into its final position.
