(54) Title: FACE-BASED LIVING BODY DETECTION METHOD AND APPARATUS

(54) 发明名称: 人脸活体检测方法及装置

S210 Acquire a plurality of facial images, which are successively captured with regard to a first user
S220 For any target attribute among several preset image attributes, select two facial images from among the plurality of facial images, wherein the difference between two attribute values, corresponding to the target attribute, of the two facial images reaches a predetermined standard
S230 Input both of the two facial images into a pre-trained face-based living body detection model corresponding to the target attribute, so as to obtain a detection result corresponding to the target attribute

(57) Abstract: A face-based living body detection method. The method comprises: firstly, acquiring a plurality of facial images, which are successively captured with regard to a first user (S210); subsequently, for any target attribute among several preset image attributes, selecting two facial images from among the plurality of facial images, wherein the difference between two attribute values, corresponding to the target attribute, of the two facial images reaches a predetermined standard (S220); and then, inputting both of the two facial images into a pre-trained face-based living body detection model corresponding to the target attribute, so as to obtain a detection result corresponding to the target attribute (S230).

(57) 摘要: 一种人脸活体检测方法, 包括: 首先, 获取针对第一用户连续捕获的多张人脸图像 (S210); 接着, 针对预先设定的若干图像属性中任一的目标属性, 从所述多张人脸图像中选取两张人脸图像, 此两张人脸图像对应所述目标属性的两个属性值之间的差异度达到预定标准 (S220); 然后, 将所述两张人脸图像共同输入预先训练好的与所述目标属性对应的人脸活体检测模型中, 得到与所述目标属性对应的检测结果 (S230)。
