(54) Title: SYSTEMS AND METHODS FOR WIRELESS COMMUNICATION IN RIDE ATTRACTIONS

FIG. 1

(57) Abstract: A system includes an attraction vehicle in an attraction. The attraction vehicle includes one or more sensors configured to measure one or more parameters pertaining to the attraction. The system also includes a network interface configured to transmit information related to the one or more parameters wirelessly using outgoing signals in a first high-frequency band and to receive incoming information at the attraction vehicle wirelessly using incoming signals using a second high-frequency band. The system also includes a controller configured to operate the attraction vehicle based at least in part on the incoming information.
