Claims

1. A method, comprising:

concurrently displaying, in a single user interface, first, second, and third live video and audio streams from respective first, second, and third participants in an online mediation of a dispute, wherein the first and second participants are parties to the dispute, and the third participant is a mediator of the dispute;

concurrently displaying, in the single user interface with the first, second, and third live video and audio streams, a single live transcription of terms of settlement for the dispute captured from the first, second, and third live video and audio streams by a scribe selected by the mediator.

2. The method of claim 1, wherein the single live transcription displays the scribe's name and headings comprising recitals, subject claim, settlement sum, payment terms, payee, nominated account details, jurisdiction, and additional operative term.

3. The method of claim 1, further comprising displaying, during the online mediation in the single user interface, a settlement agreement for the dispute based on the single live transcription.

4. A system, comprising:

one or more processors; and

memory storing one or more programs, wherein the one or more programs are configured to be executed by the one or more processors, the one or more programs including instructions for:

concurrently displaying, in a single user interface, first, second, and third live video and audio streams from respective first, second, and third participants in an online mediation of a dispute, wherein the first and second participants are parties to the dispute, and the third participant is a mediator of the dispute;

concurrently displaying, in the single user interface with the first, second, and third live video and audio streams, a single live transcription of terms of settlement for the dispute captured from the first, second, and third live video and audio streams by a scribe selected by the mediator.

5. A method, comprising:

concurrently displaying, in a single user interface, first, second, and third live video and audio streams from respective first, second, and third participants in an online mediation of a dispute, wherein the first and second participants are parties to the dispute, and the third participant is a mediator of the dispute, the single user interfacing comprising:

text input boxes corresponding to draft terms of settlement for the dispute, such as recitals, subject claim, settlement sum, payment terms, payee, nominated account details, jurisdiction, and additional operative terms; and

concurrently displaying, in the single user interface with the first, second, and third live video and audio streams, a single live transcription of terms of settlement for the dispute captured from the first, second, and third live video and audio streams by a scribe selected by the mediator, the terms of settlement for the dispute based on the draft terms of settlement for the dispute contained in the text input boxes.

6. The method of claim 5, further comprising in real-time during the online mediation, entering free-form input text to the text input boxes, the free-form input text corresponding to draft terms of settlement for the dispute.

7. The method of claim 6, wherein the single live transcription of terms of settlement for the dispute is based on the free-form input text entered into the text input boxes.

8. The method of claim 5, further comprising in real-time during the online mediation, generating and displaying a text document comprising the terms of settlement for the dispute displayed in the single live transcription.

9. The method of claim 8, further comprising in real-time during the online mediation, generating and displaying legally valid signature block text for the generated text document.
