

**POLYCARBONATE COMPOSITIONS COMPRISING POLYESTER
RESINS AND ULTRAVIOLET LIGHT ABSORBERS**

Weatherable polycarbonate compositions (formulations or blends)
5 comprise polycarbonate, cycloaliphatic polyester resins, at least one of a
benzotriazole, benzophenone, and triazine based UVA, and a catalyst
quencher. The incorporation of the cycloaliphatic polyester resin and the
benzotriazole, benzophenone, and triazine based UVA exhibits a
synergistic effect, thereby resulting in unexpected enhanced protection of
10 the polycarbonate compositions by imparting photostability to the
polycarbonate formulations, thereby reducing yellowing or other forms of
light induced degradation.
