

CHARACTER RECOGNITION SYSTEM, CHARACTER RECOGNITION PROGRAM AND CHARACTER RECOGNITION METHOD

ABSTRACT

[Problem] To provide a character recognition system that is capable of recognizing, with a high degree of probability, characters displayed on a computer display. [Solution] A character recognition system (1) for recognizing characters displayed on a display (30) of a computer, wherein the following are provided: a memory device (122) that stores a recognition dictionary that, for combinations of a prescribed display font and character size, has information regarding the layout of dots constituting each character having the display font and character size; and a character recognition unit (25) that identifies a character to be recognized by referring to the recognition dictionary to extract a character that completely matches the information regarding the layout of dots constituting the character to be recognized that is displayed on the display (30).
