

ABSTRACT

PREDUST AND COMPOSITION FOR BATTER

Provided is a predust and a composition for batter capable of reducing a stickiness of a coating of a deep-fried food or the like, and a method for reducing the stickiness of the coating.

A predust contains one or two selected from the group consisting of acid-treated legume starches and oxidation-treated legume starches. Furthermore, a method for reducing a stickiness of a coating of a deep-fried food or a deep-fried food-like food includes a step of coating an outside of an ingredient with the predust.

A composition for batter contains an acid-treated legume starch having an average molecular weight of 15×10^3 or more and 400×10^3 or less. Furthermore, a method for reducing a stickiness of a coating of a deep-fried food or a deep-fried food-like food includes a step of coating an outside of an ingredient with a batter containing the composition for batter.
