

ABSTRACT OF THE DISCLOSURE**CLEANING DEVICE**

A cleaning device is for cleaning a foam exit of a foaming machine. The cleaning device includes a gas pipeline, a gas pump connected to an inlet portion of the gas pipeline for providing gas into the gas pipeline, a pressure controller disposed on the gas pipeline, a closed container communicating with an outlet portion of the gas pipeline, and a cleaning duct communicating with the closed container, and having a duct end that is adjacent to a nozzle portion of the gas pipeline. The cleaning solution in the closed container is expelled by the gas that comes out from the outlet portion to flow along the cleaning duct to the duct end, and is atomized and sprayed out by the gas at the nozzle portion.
