

1. Minimum interval of 96 hours, maximum interval of 8 weeks from rFVIII injection to first injection of 50 IU/kg rFVIII-Fc for sequential PK profiling.
 2. Starting regimen for twice weekly individualized (tailored) prophylaxis of 25 IU/kg on first day of week followed by 50 IU/kg on fourth day, with dose and interval adjusted to achieve target trough level of approximately 1% to 3% (or higher, as clinically indicated). FVIII level assessed at peak and trough.
 3. Repeat dose of 50 IU/kg rFVIII-Fc for sequential PK profiling administered at Week 14, or at 12 to 24 weeks after first injection of rFVIII-Fc.
 4. Continued individualized prophylaxis regimen until 28 (±2) weeks up to 52 (±2) weeks.
