

## WEB STRUCTURE MEMBRANE SPACER

### ABSTRACT

- 5 A membrane spacer comprising two or more sub-spacers. The at least one sub-spacer includes an inlet aperture and an outlet aperture where the inlet aperture connected to the outlet aperture by a substantially curved flow path. The substantially curved flow path includes a plurality of grid sectors running perpendicular to the curved flow path. The two or more sub-spacers are aligned to provide a tortuous flow path between the
- 10 inlet aperture and the outlet aperture.
