(54) Title: COMBINATION COMPRISING AN ADC OR AN AOC COMPRISING A VH1, AND A SAPONIN OR A LI-GAND-SAPONIN CONJUGATE

(57) Abstract: The invention relates to a pharmaceutical combination comprising: a first conjugate comprising at least one effector molecule and a single-domain antibody (sdAb) for binding to a first cell-surface molecule; and comprising a saponin, a derivative thereof, or a second conjugate comprising a binding molecule for binding to a second cell-surface molecule and the saponin and/or the derivative thereof, wherein the saponin or the derivative thereof is a monodesmosidic or bidesmosidic triterpene glycoside. The invention also relates to a composition comprising the first conjugate and the saponin (derivative) or the second conjugate comprising the saponin (derivative). In addition, the invention relates to a pharmaceutical combination or composition of the invention, for use as a medicament, and for use in the treatment or the prophylaxis of a cancer, an auto-immune disease such as rheumatoid arthritis, an enzyme deficiency, a gene defect, a disease relating to a gene defect, an amyloidosis, a disease related to an enzyme deficiency, an infection such as a viral infection, hypercholesterolemia, primary hyperoxaluria, haemophilia A, haemophilia B, alpha-1 antitrypsin related liver disease, acute hepatic porphyria, transthyretin-mediated amyloidosis. Furthermore, the invention relates to an in vitro or ex vivo method for transferring the first conjugate of the invention from outside a cell to inside said cell, preferably to the cytosol of said cell.
