STRUCTURED HIGH-PROTEIN MEAT ANALOGUE COMPOSITIONS WITH MICROBIAL HEME FLAVORANTS

Abstract

Structured food compositions, such as meat analogue compositions, which include protein products from microorganisms, such as microorganism-derived protein hydrolysates, are described. Methods of making such products are also described. Flavor enhancer compositions that contain heme-containing polypeptides, such as flavohemoglobin, from microorganisms, and food compositions, such as meat analogue compositions that include the heme-containing flavor enhancer compositions, are also described.
