

Abstract

The present invention provides a garbage disposal machine comprising:
a body;

a disposal tub installed in said body to put in a garbage and garbage disposal materials that decompose a garbage;

an agitating means for agitating garbage and garbage disposal materials in said disposal tub;

a warm air induction means for inducing warm air into said disposal tub, circulating the gas developed in the process of garbage decomposing in said disposal tub and resending the gas into said disposal tub;

a gas exhausting means for exhausting through an exhausting passage part of the gas circulated by said the warm air induction means; and

a deodorization means for deodorizing the gas in said exhausting passage exhausted by said gas exhausting means and ejecting the gas to outside.
