Abstract

BRUSH ASSEMBLY

The object of the invention is a brush assembly (3) comprising a support (4) rotatable about an axis (A) and an annular brush (5, 6) essentially consisting of a brush band (5) and an array (7) of bristles (6) connected thereto and projecting radially therefrom. According to the invention the brush band (5) and thus the bristle array (7) is mounted on the support (4) with a longitudinal extension (L) extending at an acute angle to a perpendicular to the axis (A) of the support (4).
