

ABSTRACT (FIGURE 1)

AN INFORMATION TRANSMISSION SYSTEM FOR INCREASING THE
EFFECTIVE RATE OF TRANSFER OF INFORMATION

An information delivery system comprises equipment located at a first or storage location (10) and additional equipment located at a second or utilization location (11). The locations are interconnected for transmission of information therebetween by a communication medium (12). The system includes means and methods for increasing the effective rate of transfer of information across information medium (12). These means and methods include data compression including interactive data compression. The means and methods further include the synchronised superposition of channels forming communication medium (12). Communication medium (12) can include a cellular mobile telephone network to permit transmission of information between mobile stations (311, 312) and to cellular receivers (217).
