

## ABSTRACT

### LUBRICATING OIL COMPOSITION

5        Provided is a lubricating oil composition, which has low viscosity but also prolonged  
anti-shudder life without reduction of intermetallic friction coefficient. The lubricating oil  
composition is characterized in comprising (A) a lubricating base oil, and (C) (C-1) a borated  
succinimide compound with a mass average molecular weight of 4,000-7,000 and (C-2) a  
borated succinimide compound with a mass average molecular weight of greater than 7,000-  
10,000.
