Abstract

The present invention relates to a recording apparatus and method, a reproducing apparatus and method, and a program that make it possible to photograph and record a still image and moving images before and after the still image as well. In step S1, when a still-image-with-moving-image photographing mode is set, moving image temporary storage is started. When a shutter is depressed in step S2, in step S3, a photographed still image is recorded and one moving image is generated from the moving image before the still image stored in step S1, a moving image obtained by converting the photographed still image, and a moving image photographed after the depression of the shutter and the one moving image generated is recorded. Therefore, the moving images before and after the still image are recorded together with a high-definition still image.
