

PLASTIC SURGICAL INJECTION NEEDLE HAVING SURGICAL THREAD FOR WRINKLE REMOVAL

【ABSTRACT】

5 Disclosed is an injection needle for plastic surgery prefilled with one or
more surgical threads for wrinkle removal. The injection needle for plastic
surgery is designed to have a sharp tip through which the surgical threads are
inserted into a human body and a hollow cylindrical injection portion
accommodating the surgical threads therein. Each of the surgical threads is 0.8
10 to 10 cm long and has a plurality of projections in different directions. The
projections are symmetrically formed with respect to the axis of the thread to
gather soft tissues of the skin or to stretch epidermal tissues.
