(54) Title: REFILLABLE DOSING VALVE

(57) Abstract: A refillable external dosing valve for use in dispensing a hydrocarbon fuel for a gas auto-feed drive tool. The refillable dosage valve includes an entry point (5) and a non-return valve so that a fuel canister (2) is able to be reloaded after the fuel bag internally of the canister has been totally deflated. The valve is adapted to engage the canister in a manner allowing the valve to establish fluid communication with the fuel in the canister and co-operate with a refilling nozzle of apparatus adapted to deliver a substance from a reservoir through the dosing valve to refill a receptacle with said substance. The valve is also configured to include an internal metering chamber which enables a predetermined amount of fuel to be delivered to a metering chamber within the gas auto-feed drive tool. Residual gas within the canister can also be removed when the canister is to be disposed of.

- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii)) for all designations*
- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii)) for all designations*
- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii)) for all designations*
- *of inventorship (Rule 4.17(iv)) for US only*
