

**CONCEALED HINGE AND CONCEALED GLASS DOOR HINGE WITH SLOW
AND CONSTANT CLOSING SPEED**

ABSTRACT OF THE DISCLOSURE

A concealed hinge has a first base, a second base, a pivotal-connecting assembly,
5 and a resetting assembly. The pivotal-connecting assembly pivotally connects the first
base and the second base and has a connecting block moving during pivoting. The
resetting assembly has a resetting casing, a connecting rod, an elastic unit, and two oil-
sealing rings. The connecting rod is mounted in the resetting casing and is connected to
the connecting block. The elastic unit moves the connecting block via the connecting rod
10 to pivot the first base and the second base. The oil-sealing rings are sleeved on the
connecting rod and are attached to the resetting casing.
