

**METHOD AND APPARATUS FOR CUTTING ADHESIVE TAPE
ABSTRACT OF THE DISCLOSURE**

In a method of making a cutter revolve along a circumference of a circle having an optional size to cut an adhesive tape into a circular shape of a predetermined size, the cutter is made revolve while being tilted to an
5 inner circumferential side in the revolving direction of the circumference, and a cutting start point and a cutting end point in a cutting path of the cutter are made coincide with each other.
