Abstract

A DISPLAY STRUCTURE

There is provided a display structure, including: a base component; and at least one slot on a primary surface of the base component for the placement of removable holders. Advantageously, the removable holders provide a platform for the placement and display of at least one object. Preferably, the primary surface may be extendible with the use of at least one add-on surface plate which may also include at least one slot for the placement of removable holders. Preferably, the removable holders may also be extendible to allow for the placement and display of different objects.
