Claim(s)

[Claim 1]

A curtain wall that forms a wall surface of a building, the curtain wall comprising:

a plurality of curtain wall units lined up vertically and horizontally;

a cover member configured to cover a gap between an upper curtain wall unit and a lower curtain wall unit of the plurality of curtain wall units;

a fastener attached to a skeleton and having a rising portion; and

a joint member having a hook engaged onto the rising portion from above, wherein

at least one of the curtain wall units includes

a panel and

an intermediate bracket member configured to fix the joint member to the panel directly or with a retainer for retaining the panel interposed, and

a portion that fixes the joint member and the intermediate bracket member is on an outer peripheral side of the panel and the at least one of curtain wall units is fixed by a fixing device from an exterior side when the cover member is removed from the curtain wall to expose the intermediate bracket member.

[Claim 2]

The curtain wall according to claim 1, wherein

the intermediate bracket member is provided at each of a top and a bottom of the curtain wall unit, and

the joint member includes a lower fixing section fixed to the intermediate bracket member in the curtain wall unit on a lower side, and an upper fixing section fixed to the intermediate bracket member in the curtain wall unit on an

upper side.

[Claim 3]

The curtain wall according to claim 2, wherein the upper fixing section has an upper restraining section configured to restrain the curtain wall unit on the upper side from moving toward the exterior side.

[Claim 4]

The curtain wall according to claim 2, wherein the lower fixing section has a lower restraining section configured to restrain the curtain wall unit on the lower side from moving toward the exterior side.

[Claim 5]

The curtain wall according to claim 2, wherein the lower fixing section has a support configured to support the curtain wall unit on the lower side.

[Claim 6]

The curtain wall according to claim 2, further comprising a cover member configured to cover the exterior side from the intermediate bracket member fixed to the lower fixing section to the intermediate bracket member fixed to the upper fixing section.

[Claim 7]

The curtain wall according to claim 1, wherein

the panel is fixed to the joint member with the retainer interposed, and

the intermediate bracket member is a metal fitting in an L shape in a planar view and includes a front piece fixed to an exterior-side front surface of the joint member

and a depth piece fixed to a depth surface of the retainer.

[Claim 8]

The curtain wall according to claim 1, wherein the joint member includes an anti-ascending section facing a lower surface of the fastener.
