(54) Title: A METHOD AND MEANS TO CREATE AN INDIVIDUALLY CONTROLLED CLIMATE AT A SEPARATE WORKSTATION IN A ROOM HAVING A PRIMARY CLIMATE EQUIPMENT

(57) Abstract: The present invention relates to a method and means to create an individually controlled climate at a separate workstation in a room having a primary climate equipment by using one of several possible connection points at a connection network in a roof or in a ceiling and covering an essential part of the surface of the room. The invention is characterised in that a secondary, individual climate influencing equipment at the primary room climate equipment is releasable connected to one of several possible connection points at a conduit network in the ceiling or in the floor and covering an essential part of the room surface, whereby at least the incoming and/or outflowing air is fed through said connection network and that the user of the separate work station will set or influence means to control flow and temperature of the inflow and or outflow of air to and from the workstation, respectively.
