

ABSTRACT

An application operation mode switching method and apparatus, an electronic device, and a storage medium. The switching method comprises: acquiring application power saving information preset by a user (S101); when an application is running, acquiring the remaining power of a terminal in which the application is installed (S102); and determining, according to the application power saving information and the remaining power of the terminal, whether to cause the application to switch from a current operation mode to an application power saving mode (S103). The above method provides a reasonable scheme that reduces power consumption of a terminal from an application perspective. Assuming an application supports power saving mode settings, the invention can reduce power consumption of a terminal by simply causing the application to enter an application power saving mode.
