(54) Title: SOLAR MODULE FRAME MEMBER

(57) Abstract: A frame member for a bifacial solar module. The frame member comprises a retaining portion (or e.g. a holder) configured to retain (or e.g. hold) a longitudinally extending edge of a solar module, such that the solar module, when retained (or e.g. held) by the retaining portion, extends laterally inwardly from the retaining portion along a reference plane. The frame member also includes a reflector surface disposed rearwardly and laterally inwardly of the retaining portion. The reflector surface slopes in a direction away from the reference plane such that light passing through the reference plane and onto the reflector surface is reflected by the reflector surface in a forward and laterally inward direction.
