

Apparatus And Method For Measuring Static Pressure In An Aircraft**ABSTRACT**

5 System and method for measuring static pressure of an aircraft are disclosed. The system comprises: a plurality of static ports mounted on the fuselage of the aircraft, wherein outputs of each of the static ports are connected to a pressure stabilizer, and the pressure stabilizer is operable to provide average pressure from the plurality of the static ports to a static pressure sensor located on a flight control computer
10 (FCC) board of the aircraft.
