

ABSTRACT OF THE DISCLOSURE

FILLING STATION SYSTEM FOR FREE ACCESS TO THE INTERNET

Disclosed is a method for providing Internet access. Information about a user is sent to a RADIUS server. The server searches a database for the information. If the information is found, an amount of free Internet access time is allocated to the user. The time that the user is accessing the Internet is tracked. Once the amount of free Internet access time is depleted, access to the Internet is discontinued. Options to increase the amount of free Internet access time by amounts of additional free Internet access time are provided. Software may be required to obtain the amounts of free or additional free Internet access time. An access card may be required to obtain the amounts of free or additional free Internet access time.
