(54) Title: SYSTEM, METHOD, AND DEVICE UTILIZING REVERSIBLE CONNECTOR

FIG. 1

(57) Abstract: A compression garment that is selectively engageable and operable by a controller for inflation via a reversible connector, the compression garment comprising a plurality of bladders and compression garment tubing. The compression garment tubing includes a plurality of garment tubes in fluid communication with the plurality of bladders at a first compression garment tubing end and includes a second compression garment tubing end opposite the first compression garment tubing end. The reversible connector has a first connector portion and second connector portion, the first connector portion and the second connector portion being selectively reversibly connectable together to form the reversible connector.
