(54) Title: A PROCESS FOR THE PRODUCTION OF ADENOVIRUS

Figure 9

(57) Abstract: A Process for the Production of Adenovirus The present disclosure relates to a continuous process for the manufacture of an adenovirus wherein the process comprises the steps: A) continuously culturing, in a vessel, mammalian cells infected with the adenovirus in the presence of media suitable for supporting the cells such that the virus replicates, wherein the cells are capable of supporting viral replication, and B) isolating from the media the virus produced from step a) wherein the isolation of virus is not subsequent to a cell lysis step, wherein viable cells for virus infection and production are maintained in the vessel at a level suitable for replicating the virus for the period of continuous manufacture, wherein the process comprises at least one media change or addition and at least one cell change or addition. The disclosure also extends to viruses populations obtained or obtainable from the method.
