

Disposable Diaper and Method of Its Production

ABSTRACT

5 An object of the present disclosure is avoiding
damage to disposable diapers caused by the separation of
the crotch section sheet from the belly side sheet member
or back side sheet member occurring when the crotch
section sheet member is pulled downward by weight,
10 without impairing the comfort of the wearer. The present
disclosure is as follows.

 The disposable diaper 1 is comprised of a crotch
section sheet member 2 that is long in one direction, a
belly side sheet member 3, and a back side sheet member
15 4. The crotch section sheet member 2 comprises first
adhesive sections 26 having first adhesive-coated regions
28 coated continuously in the lengthwise direction of the
crotch section sheet member 2, and the belly side sheet
member 3 and the back side sheet member 4 comprise second
20 adhesive sections 27 having second adhesive-coated
regions 30 coated continuously in the widthwise direction
of the crotch section sheet member 2, at sections where
the crotch section sheet member is to contact with the
belly side sheet member 3 and the back side sheet member
25 4. The crotch section sheet member 2 is bonded to the
belly side sheet member 3 and the back side sheet member
4 with the first adhesive-coated regions 28 and the
second adhesive-coated regions 30 crossing each other.
