

ABSTRACT

IC CARD SYSTEM AND INFORMATION REGISTERING METHOD

5 An IC card system includes an IC card management server and an IC card.
The IC card management server requests a SIM management server to make an inquiry
regarding a user based on card identification information and user information relating to
a contract of SIM card, and, in a case that validity of the user is verified, transmits a
generation request for generating a registration application registering biometric
10 authentication information, including the card identification information and the secret
key, to the SIM management server. The IC card includes a data storage storing the
card identification information and the secret key and storing the biometric
authentication information and, in a case that authentication based on the card
identification information and the secret key through communication with the SIM card
15 based on the registration application is succeed, stores the biometric authentication
information based on the biometric information in the data storage.
